

REACT UI SKILLS THAT HELP

ONE DASHBOARD | ONE REUSABLE WORKFLOW

THE REQUEST IS SMALL. DONE IS NOT.

Add a Deployment status widget.

READY when incidents = 0 and build success $\geq$ 98%.

Done also means consistent, responsive, accessible, recoverable, and verified.

AN SPA CHANGES THE VIEW, NOT THE DOCUMENT

- 1 The browser loads one application document.
- 2 React Router maps / and /activity to views.
- 3 React updates the visible view without a full-page reload.

The URL still supports Back, bookmarks, and sharing.

COMPONENTS GIVE EACH PART ONE JOB

PART	FILTERS	METRICS	TREND	ACTIVITY
Component	Filters	MetricCard	TrendChart	ActivityTable
Input	team + time	Metric	TrendPoint[]	ActivityItem[]
Job	change state	summarize	show history	show detail
Value	one concern	reuse	context	details

PRODUCTION-READY MEANS EVERY STATE

DESKTOP

Clear hierarchy

MOBILE

Responsive reflow

EMPTY

Reset is offered

ERROR

Retry is offered

ONE PROMPT SOLVES ONE TASK

A SKILL PROTECTS THE NEXT TEN

PUT GUIDANCE AT THE RIGHT LIFETIME

LAYER	PROMPT	AGENTS.md	CLAUDE.md	SKILL
When	this task	every task	Claude start	on demand
Contains	outcome	repo rules	@AGENTS.md	workflow
Example	add widget	run gates	import	UI review
Memory	once	always	shared	reusable

CREATE A SKILL ONLY WHEN WORK REPEATS

GOOD FIT

Repeated | specialized | easy to omit | worth verifying

KEEP ELSEWHERE

One-off outcome -> prompt

Repository fact -> AGENTS.md

General knowledge -> omit

THE DESCRIPTION DECIDES WHEN IT RUNS

BAD

Helps with UI work.

GOOD

Build or review accessible, responsive React UI with complete data states and reliable verification.

Use when creating pages, changing interactive UI, or fixing accessibility or responsive issues.

WRITE THE BODY AS AN OPERATING SEQUENCE

STAGE	INSPECT	IMPLEMENT	VERIFY	REPORT
Instruction	read repo	small change	run gates	show evidence
Freedom	high	medium	low	human review
Exit	pattern found	states complete	checks pass	gaps known
Style	imperative	coherent	deterministic	specific

KEEP SKILL.MD LEAN

```
build-quality-react-ui/  
|-- SKILL.md workflow  
|-- agents/openai.yaml UI metadata  
`-- references/ui-standards.md details
```

Load order: metadata -> body -> reference only when needed.

THE SAME REQUEST PRODUCES DIFFERENT EVIDENCE

EVIDENCE	BASELINE	WITH SKILL	OBSERVED	LESSON
Rule + reuse	yes	yes	same request	not a guarantee
Ready path	unit only	unit + live filter	demo added	visible proof
A11y + mobile	axe + 2 sizes	axe + semantics	visual gap told	report gaps
Checks	7 unit + 5 e2e	5 unit + 5 e2e	both passed	evidence wins

VALIDATE THE SKILL AND THE BEHAVIOR

- 1 Run `quick_validate.py`.
- 2 Test three requests that should trigger.
- 3 Test two requests that should not.
- 4 Forward-test on a realistic task.
- 5 Improve the skill from evidence.
- 6 Publish and prevent mirror drift.

INSTALL

`npm ci`

RUN

`npm run dev`

TRY

`$build-quality-react-ui`
